
About Me

Passionate about information technologies and above all about the human organizations that operate them, leader at heart. Expert in technologies that propel the internet with 10+ years of experience, comfortable in multiple fields : functional and technical architectures, software engineering, reliability engineering, security (off/def), performance, systems and networks administration : at scale.

Coach in road and track cycling, practice swimming and hiking in high mountains.

Professional experiences

DevOps Technical Leader at Cdiscount

From 02/2019 to today

Technical leader within the IT Customer Experience Department bringing the DevOps culture to 90 developers / scrum master.

Role of Ops technical manager: close collaboration with the main Technical manager of the department and the Architecture department (150 employees) including product teams (pooled) and Ops teams.

Main site reliability engineer on the Linux park. Cdiscount production is around 5,000 physical servers spread over 2 data centers in France and a CDN with 6 points of presence. And some projects in the Azure cloud.

IT Customer Experience Department in charge of:

- PC and mobile site www.cdiscount.com
- mobile applications
- order.cdiscount.com
- clients.cdiscount.com

Main missions centered around:

- empowerment of developers on Ops, Perf and Security aspects
- N2 on-call on the Linux park: the CDN, the Kubernetes (formerly Mesos / Marathon), Ceph, MongoDB, Cassandra, CouchBase, Elasticsearch, Prometheus (Thanos), RabbitMQ, Kafka, Mapr, MediaDelivery Platform clusters.
- continuous DevPerfOps performance and continuous DevSecOps security premises on projects: Java (8, 10, 11), .net core (2.1, 3.1), NodeJS (12, 14, 15) : microservices architectures
- development of “Ops” features such as observability, tracing logging metrics; features “Perf”; debug
- technical training in the form of recorded webinars
- DevOps community facilitator (company scale)

Architect Engineer at Orange Business Services

From 07/2018 to 02/2019

Promotion to the post of engineer-architect at the Orange Applications for Business IT department (team of 30 employees).

Interconnect the tools of the business departments and those of the IT department at the architectural levels : Application, Data and Infrastructure.

Guarantee the consistency and automation of the construction of applications from the developer desktop to production between developers and operators. Ensure good harmony in complex projects including multiple actors.

Training and skills development of engineers on the HR movement management product from the local docker image to production servers, monitoring, scalability, security.

Assets: TOGAF, Git, Docker, VMware, Nginx, Debian, OWASP ZAP, MySQL, SaltStack, PHP, Scrum, DDD, TDD, DAT

Development and production engineer at Orange Business Services

From 08/2015 to 07/2018

Improve the practices of developers and system administrators within the SI team of 12 employees.

Technical manager of the movement management application for employees and service providers. Software development in a microservices architecture.

Creation of a correlation identifier generated from the first reverse proxy of the microservices architecture with editing of the shared libraries (microservices) in order to transmit this identifier in integrity. With correlation of logs via kibana dashboards. Creation of the elastic stack locally then industrialization + technical architecture documentation for production with stamp from the main system engineer (a king of Zipkin first alpha release).

Advanced industrialization via Dockerfile, docker-compose, unit tests, bdd mock for TU, integration tests, test on mutation tests, Sonar analyzes, ORM, hexagonal architecture, DDD, CI/CD jenkins and especially piloting of the deployment on environments via git branches, (fork Gitflow house) for the employee movement management project.

Force of proposal and sometimes aMOA on ISD projects.

Continuous training of management engineers on the work carried out.

Assets: Docker, PHP, MySQL, Nginx, Debian, Git, Jenkins, Sonar, Gitlab, Zend Framework, PHPUnit, Slim framework, Elasticsearch, Filebeat, Logstash, Grok, Kiban, Jira, DDD, TDD, DAT, Javascript, jQuery, Doctrine Framework, Bash

Engineering study of Information Service at Orange Business Services

From 09/2013 to 07/2015

End of work-study program with writing of a dissertation: IT industrialization of movement processes at Human Resources. In-depth study of the HR profession, HRIS in business and demonstration of a technical, technological and human organization application.

Creation from scratch of a web project for managing employee movements : software craftsmanship. This project made it possible to free several FTEs in the arduous tasks of HR paperwork to improve their quality in the processing of information and to focus on issues around people in the company and not on software issues that do not meet well for their needs.

Strong skills development on DDD in PHP, Docker, Linux Debian, software security and system administration.

First training sessions given on Docker and technical and technological advances in projects built to engineers.

System Administrator at Orange Business Services

From 06/2012 to 08/2013

Management, modification and improvement of the company’s internal tools.

Administration of Debian and Ubuntu servers. Hosted bare metal or in a VMware virtual machine.

PHP development on ten different projects: Zend framework 1 and 2.

Intervention on H0 level 3 incidents.

Writing guidelines on APIs Rest of the team and ways of naming routes, in which case use HTTP verbs, aim to better respect the REST standard and freeze the vocabulary on less clear elements of the standard.

Web Developer at MDNT Creation

3 months in 2011 and 2 months in 2012

The company strongly wanted me to come back for new assignments. What I accepted because I learned a lot from my software engineering internship master.

Developments mainly PHP and Javascript on websites.

Creation of a Prestashop module to allow the hosting of several shops and several seller accounts on the same prestashop site Batzeko project which unfortunately did not see the light of day being promising.

Development of several dynamic websites with creation of a mini framework / skeleton for a backoffice. Software craftsmanship.

Small structure, we develop, put into production and monitor websites.

Development of an algorithm which allows to make text substitutions in order to deceive the google robot at precise intervals and make believe that the text changes. Integration of this algorithm transparently so that the content editor only has to use certain tags.

Certifications

Date	Name	Issuing authority	Reference
01/2020	Certified Ethical Hacker	EC-Council	ECC0785624139
04/2018	TOGAF 9 Certified	The Open Group	f12a95be-c8eb-4af8-a074-1acac4a0fedf
04/2018	TOGAF 9 Foundation	The Open Group	2ed9a9fa-95f3-4822-a1ca-7ba22ae6e17a
06/2015	Professionnal Scrum Master I	Scrum.org	131790

Education

Year	Diploma name	Mention	School
2015	Master’s Degree - IT and information system expert	Honors	EPSI Bordeaux
2013	BSc - Network and Database System Administrator	Congratulations	EPSI Bordeaux
2012	BTEC Higher National Diploma - Management Information Systems	Good	EPSI Bordeaux
2008	High School Diploma in Sciences - Mathematics Speciality		Lycée Saint Joseph de Tivoli

Volunteering Experiences

Track and Road cycling coach

From 10/2017 to today

Member of the office as communication manager and federal diploma club coach issued by the French Cycling Federation. Organizational and logistical assistance on cycle racing, lottery, garage sale type events. Association law 1901.

President EPSI Student's office
